

PROTECT THE JEWELS. PURGE THE JUNK.

Nx is one of the first and most complete data risk intelligence solutions that fuses business data and cyber intelligence to empower companies to gain complete control of their enterprise data. Nx inventories all data, contextually classifies in business terms and categorizes surplus data that could be purged to help you reduce risk, reduce compliance and save millions.

WHY YOU NEED A DATA RISK INTELLIGENCE (DRI) SOLUTION

Lack of data visibility and accountability creates blindspots and increases business risks. Sensitive data remains at risk and data protection controls generate false alarms and remain unreliable. In the meantime, some of the excessive data may also be sensitive and legally toxic which also increases your attack surface and the probability of a data breach. Why waste money storing and protecting data you no longer need and which no one is using?

Companies need a solution that provides a complete and continuous view into all business data. Not just some data, but all data. A solution that makes collaboration across business, IT and legal easy and automated. To proactively manage data risks, you need cross-functional actionable insights. You need NVISIONx.

INVENTORY ALL YOUR DATA

Nx utilizes advanced metadata and ML/AI technologies in concert with patent-pending proprietary data intelligence algorithms to rapidly ingest, inventory, and classify all of your enterprise data. It doesn't matter if the data is structured or unstructured. It quickly scours servers, data silos, cloud-based storage, and anywhere else your data may be hiding to give you a complete view of all your corporate data.

I've never seen my data like this before. It was so easy and quick, yet extremely powerful in what it does. I finally understand what it means to state, "You cannot protect what you cannot see."

- VP of IT, Leading Automotive Telemetry Company

PROTECT THE CROWN JEWELS

Nx's broad control scope makes it simple for IT, business users and security professionals to protect an organization's data. Once data is classified as sensitive, it then gets correlated with the supporting cyber intel for every instance of where that data is stored. Nx tracks who has access to which files, when they access it, how it's being shared both internally and externally, and if the controls are reducing data risk to acceptable levels.

Nx provides multiple views to easily inform executives, in familiar business-centric terms, key risk matters as well as providing cyber and IT teams with detailed, global insights to proactively protect what matters most. Nx's data risk insights are visually intuitive, dynamic and actionable enabled by workflow automation. Real security starts with reliable and robust information presented clearly- to both cyber and business teams. Nx allows you to remain focused on protecting the corporate jewels efficiently, continuously and more completely than ever.

PURGE THE JUNK

"Keeping everything forever, just in case..." has resulted in avoidable data risks, greater compliance scopes and higher storage costs. Stop wasting valuable funds on useless data. Key in eliminating your data blindspots is to account for all your data - both useful and useless. When useless is identified through our junk data analytics, it also provides you with justifiable models as to why the data is more of a liability than an asset and should be disposed of.

Once again, Nx's Collaboration Workflow Automation keeps the teaming and decisioning within the platform and avoids having time-consuming meetings that rarely result in taking action to dispose of surplus data. Nx also has an embedded ROI calculator that delivers relevant cost savings associated with each disposal plan. Oh yeah, it also generates Certificates of Disposal, with all of the supporting stakeholder time-stamp approvals, to memorialize the recording of the event. Nx customers are realizing that defensibly deleting expired data really isn't that hard and it often saves them more than the cost of the platform!

Nx FOR YOUR ENTIRE ORGANIZATION

One solution that brings enterprise data into focus for every team across the enterprise. Nx delivers results for everyone from cybersecurity, risk, compliance, records retention, legal and business executives.

SMART TOOLS FOR ACTIONABLE DATA ANALYTICS

Using metadata to account for all your data, Nx makes it easy to sort through sprawling data silos quickly and with confidence. Nx will not only affirm what you already know about your data, but will also show you what you did not know. This is the beginning of resolving the growing concern of “dark data” sprawl. Supplemented by rules, ML/AI and cluster analytics, everything gets accounted for, everything gets classified. We go beyond privacy data and also catalog complex intellectual property, business strategies and everything else.

OPTIMIZE DATA PROTECTION CONTROLS

Put truly effective security rules in place now enriched with valuable business context. This has been a historical challenge cyber teams have been struggling with for decades. Most controls work, but poor inputs result in poor, unreliable intel to act. And that’s just the beginning of how Nx will revolutionize the way you control and protect your data. Imagine tighter integration of sensitive business data and cyber intel such that you’re now able to see the smoke (early indicators of compromise) before the house burns down (painful data breach).

DYNAMIC DASHBOARDS FOR CONTINUOUS RISK & COMPLIANCE

Inventory all of your data and go beyond privacy with NVISIONx’s full control scope. Whether it’s accommodating “the right to not exist” or deep analysis, Nx gives you the reliable visibility you need to proactively, and continuously assess privacy and other regulatory compliance postures. Why settle for point-in-time, static reports when you can continuously and completely be informed on a dynamic basis? You can now be well-prepared for any data-centric audit or assessment in which you would already know the outcomes.

RECORDS MANAGEMENT MADE MANAGEABLE

Nx’s revolutionary inventory technologies let you discover, classify, and manage records across all enterprise data storage. Its unique blended approach finds information you didn’t know you had, and its simple UI makes it all accessible.

ENHANCES LEGAL SERVICES & OPERATIONS

When it comes to eDiscovery, investigations, FOIA requests and external reporting (e.g., FOIA requests), Nx puts you a step ahead by having living inventories that can quickly be queried to find rather than search for critical data.

I have not seen any other product that does what Nx does. This Platform will be crucial as we’re preparing to IPO.”

- SVP & CISO, GLOBAL MUSIC COMPANY

Start Saving Time and Money with NVISIONx

Every minute that business data remains unaccounted for creates risk... compliance, data risks, legal, operational and financial. Reach out to experience Nx impressive data risk capabilities. See what it’s like to be in control of your data risks and how critical, data-driven functions mature and become more capable. Expect more and start thinking more strategically by Protecting the Jewels and Purging the Junk. Nx is what being in control of your data looks like.
